Fig.13

This is a high-contrast, black and white micrograph showing a dense, granular texture. The image is characterized by a complex, irregular pattern of dark, interconnected lines and bright, speckled areas, suggesting a highly textured surface or a biological structure like a tissue section. The overall appearance is that of a detailed, close-up view of a material with a rough, porous, or cellular quality.

A high-contrast, black and white photograph of a rough, textured surface, possibly a rock or concrete. A dark, elongated object, likely a pencil or pen, is placed horizontally across the upper left portion of the image to provide a sense of scale. The surface is highly irregular, with numerous small pits, ridges, and variations in tone, creating a complex, granular appearance. The lighting is harsh, emphasizing the texture and creating deep shadows and bright highlights.
